

Carelon Real World Data

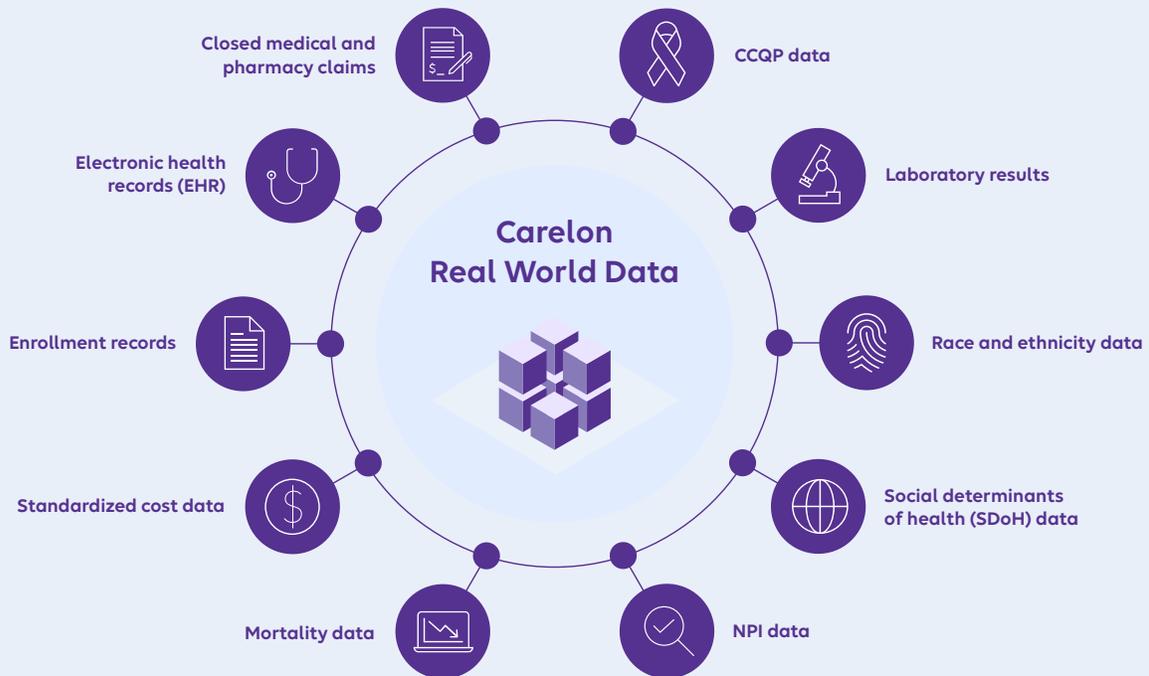

Unlock the data that has powered decades of impactful life sciences and healthcare research

Carelon Real World Data is a certified deidentified licensable subset of the Healthcare Integrated Research Database (HIRD®), a proprietary database of commercial and Medicare populations built by Carelon Research (formerly HealthCore), the research arm of Elevance Health.

Developed through decades of rigorous quality control, our data is designed to tackle complex healthcare challenges and empower our life sciences clients to generate meaningful real-world evidence and market access insights — quickly and effectively.

Analysis-ready, integrated real-world data

Carelon Real World Data — the most complete, analysis-ready, closed claims data resource available — draws from the Healthcare Integrated Research Database (HIRD®)

CCQP: Cancer Care Quality Program

Analysis-ready datasets and research support

Depth and breadth

National representation of commercial and Medicare closed healthcare claims linked to enrollment and EHR records as well as laboratory results and SDoH data

Quality

Analysis-ready patient, provider, and payer data refined through decades of research and direct connectivity to the source

Expertise

Technical and scientific support by a multidisciplinary team of researchers to help clients understand our data as well as we do, rooted in our own research heritage and portfolio of more than 3,000 publications

Explore more complete, granular insights

Our integrated data supports the generation of granular insights about patients and treatments across therapeutic areas. We designed it based on our decades of experience, aiming to help life sciences companies answer specific research, market access, and care-related questions.
